

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

party will go to New Zealand, where animal and plant life and geological formations are of peculiar interest. The official secretary of New Zealand has written to say that everything possible will be done to make their stay in that country a success. It is expected that the return voyage will end in Vancouver about September 9 in time for the opening of the university.

THE SECTION OF MEDICAL SCIENCES OF THE AMERICAN ASSOCIATION

It may be of some interest, in this period of co-ordination, to know that at the Toronto meeting a group of parasitologists, medical entomologists and medical workers met and decided upon the following policy for Section N, Medical Sciences:

1. That it was extremely desirable and necessary that a closer co-ordination between parasitologists, entomologists and medical workers be worked out.

2. That the secretary of Section N (Medical Science), after consultation with the secretaries of the related societies, arrange for a program which will avoid conflicts with related groups.

3. That the secretaries of the allied societies, co-operating with the secretary of Section N (Medical Sciences), suggest those of its members who might be invited to take part in a symposium at which the significant researches are reported that are of interest to the allied groups of workers.

4. It was deemed undesirable to attempt for the present any formal co-operation between these related societies.

5. That the time has come when there is a definite need for the discussion of such papers as affect the interests in the allied groups, both for stimulation and for information.

6. That each secretary so arrange the papers of its society's program that it may be possible for its members to meet with Section N (Medical Sciences) without too serious a loss.

7. That the joint meeting be held under the auspices of Section N (Medical Sciences).

Section N (Medical Sciences) is proceeding

with this policy on the assumption that such arrangements will in no way conflict with any program that may be adopted at the Washington conference, held under the auspices of the National Research Council.

A. J. GOLDFARB,
Secretary.

THE BOCHER MEMORIAL PRIZE OF THE AMERICAN MATHEMATICAL SOCIETY

THE American Mathematical Society announces the foundation of a prize in memory of the late Professor Maxime Bôcher, of Harvard University. Soon after the death of Professor Bôcher, in 1918, a fund was raised in his memory through the efforts of Professor T. S. Fiske, of Columbia University, which was turned over to the American Mathematical Society. On recommendation of a committee of which Professor E. B. Van Vleck, of the University of Wisconsin, was chairman, the council of the society has decided to devote the interest of this fund to the establishment of a prize, to be called the Bôcher Memorial Prize, and to be awarded at five year intervals, for a notable research memoir published in the *Transactions of the American Mathematical Society* during the preceding five years by a resident of the United States or Canada. The age of the recipient shall not be over forty years, and the prize shall not be awarded twice to the same person. The first award (of \$100) is to be made for a memoir published during the period 1918-1922, and will be conferred at some meeting of the society in 1923.

This prize, which is believed to be the first mathematical prize to be given in this country at regular intervals for research in pure mathematics, is an especially appropriate memorial for Professor Bôcher, not only because of his achievements in research, but also because of his great services to mathematics in this country as one of the founders and for many years one of the editors of the *Transactions of the American Mathematical Society*; for this latter reason the provision that the prize must be awarded for a memoir published in the *Transactions* seems particularly appropriate.
